## EDUCATION

---

### University of Central Florida

Orlando, FL

*Ph.D. in Computer Engineering (GPA: -)*

*Aug. 2021 – Present*

**Advisors:** Dr. Zhishan Guo and Dr. Yaser P. Fallah

**Research:** Autonomous Systems, Real-time Systems, Reinforcement Learning

### University of Kansas

Lawrence, KS

*Ph.D. (Transferred to UCF) in Computer Science (GPA: 4.0)*

*Jan. 2021 – May 2021*

**Graduate Teaching Assistant:** EECS 140 Introduction to Digital Logic Design

### University of Central Florida

Orlando, FL

*M.S. in Computer Engineering (GPA: 3.84)*

*Aug. 2016 – Aug. 2018*

**Thesis:** Real-time SIL Emulation Architecture for Cooperative Automated Vehicles

**Advisor:** Dr. Yaser P. Fallah

**Research:** Intelligent Transportation Systems, Robotics & Automation, Vehicular Networks, ADAS

### University of Mumbai

Mumbai, India

*Bachelors in Electronics Engineering (GPA: 3.90)*

*Aug. 2010 – May 2014*

Ranked *1st* amongst 120 students in the Electronics dept.

Creative team head at Annual college festival – *Pegasus*

## WORK EXPERIENCE

---

### Real-Time & Intelligent Systems Lab

Orlando, FL

*Graduate Research Assistant*

*Aug. 2021 - Present*

- Leading the F1tenth-autonomous racing platform development team
- Exploring and collaborating research in applications of ML and RL in real-time cyber-physical systems

### NHK International Corporation

Novi, MI

*Research Engineer II - Research & Analysis Team*

*Nov. 2018 - July 2020*

- Prototyping and development of factory automation systems based on robotics and SOTA computer vision algorithms for a highly dynamic industrial environment
- Developed pipeline to acquire point cloud data from sensor, integration with ROS, point cloud segmentation, model fitting using RANSAC and ICP, model perception, robot motion & path planning with Moveit, and supported with a Qt-based GUI

### CAVREL at UCF

Orlando, FL

*Graduate Research Assistant*

*Feb. 2017 - Aug. 2018*

- **Real-Time SIL Emulator for ADAS Testing and Validation** – *Sponsor: Ford Motor Company*  
Designed and developed a unique and easily configurable emulation/simulation architecture to allow Software-In-Loop testing and validation of connected vehicle applications
- **Small-scale Connected Autonomous Vehicle** – *Sponsor: NSL*  
Mentored a team of 5 undergraduate students to build a fleet of vision sensors equipped small-scale autonomous vehicles to navigate using advanced planning algorithms and thus provide a test-bed for V2X safety applications
- **Vehicle Safety Communications Applications** – *Sponsor: CAMP*  
Research and development in DSRC based V2V Safety Networks, Model-based Information Networking for situation awareness in Automated vehicles

### Giant Health Events

Remote

*Machine Learning Intern*

*May 2017 - June 2017*

### Tata Consultancy Services Ltd.

Mumbai, India

*Business Intelligence Developer*

*Sept. 2014 - July 2016*

## TECHNICAL SKILLS

---

**Languages:** Python, C++, C, MATLAB

**Hardware:** LiDAR, Depth Cameras, NVidia Jetsons, Arduino, Raspberry Pi, FPGA

**Libraries:** TensorFlow, Keras, PyTorch, OpenAI Gym, PCL, VTK, OpenCV, Eigen, Pandas

**Tools:** ROS 1 & 2, Git, Gazebo, Moveit, CloudCompare, NS3, SUMO simulator, Qt, VSCode

### AWARDS

Recipient of 2021 Dean's Fellowship @UCF

Recipient of 2021 Hoglund Fellowship @KU

Recipient of 2014 Dean's Award @PCE

### CERTIFICATIONS

Machine Learning by Andrew Ng @Coursera

Self-Driving Car Nanodegree @Udacity

Robotics Engineer Nanodegree @Udacity

## PROJECTS

---

### Vehicle Detection and Tracking

*Oct. 2017 – Nov. 2017*

- Trained an SVM classifier to distinguish between car and non-car images with 98.56 % accuracy
- Accurately tracked vehicles using a stream of sliding bounding boxes of different scales
- Developed a heat-map of all positively detected vehicles to remove false positive based on a threshold

### Driver's Behavior Cloning

*Sep. 2017 – Oct. 2017*

- Designed a CNN to predict steering wheel angles in a challenging simulated environment based on the human driving behavior (Validation Loss < 0.35%)

### Traffic Sign Classification using Camera

*Aug. 2017 – Sep. 2017*

- Built and fine-tuned a CNN over a small dataset to classify traffic signs, using a mounted camera
- Attained 97% test accuracy on a German traffic sign dataset

### Autonomous Rescue Robot

*Feb. 2017 – Apr. 2017*

- Built a 4-wheeled autonomous car for search and rescue operations in a disaster-affected area to explore and identify victims
- Programmed ROS (Robot Operating System) nodes for gathering the odometry data along with the scans from a Kinect sensor (to create 2D Occupancy maps) into a raspberry pi
- Implemented a Particle Filter for localization and a Path Planning algorithm for navigation to various goals using offline maps created during the training phase

### Path Planning and Q-Learning in a grid world

*Feb. 2017 – Mar. 2017*

- Implemented A-star path planning algorithm with Manhattan and Euclidean distance choice in an interactive grid world GUI using python's tkinter library
- Designed a Reinforcement learning engine with deterministic and stochastic behavior in the grid world

### Concurrent Physics Engine

*Oct. 2016 – Nov. 2016*

- Linearized a Physics Engine consisting of circles moving with random velocities around the screen and colliding with each other
- Implemented concurrent (Lock-free) version of SAP (Sweep and Prune) and Hash grid

### Surveillance based on Tracking and Targeting

*Oct. 2013 – Mar. 2014*

- Built a MATLAB based security system to tackle the situations like 2008 Mumbai attacks
- Led a team of three members to develop a real-time object detection and tracking algorithm, which controlled a camera-laser mounted robotic arm to continuously track and target the suspect
